PROFESSIONAL SUMMARY

Software Engineer with up to 2 years of industry experience building agentic systems and LLM infrastructure. Founded and solo-engineered VibeQuorum, a multi-agent SaaS with 300+ waitlist signups. MS in Computer Science (AI/ML) from Texas A&M University.

EDUCATION

Texas A&M University | Master's in Computer Science (GPA: 3.8/4.0), San Antonio, USA | Jan 2025 - May 2026

- Research Assistant, Deep Learning: Investigating hallucination mitigation in retrieval-augmented generation (RAG) pipelines using transformer attention mechanisms, evaluating faithfulness and answer relevancy with RAGAS for factually consistent LLM outputs.
- Coursework: Artificial Intelligence, Machine Learning & Deep Learning, Algorithms, Operating Systems, Secure Software Development

EXPERIENCE

Software Development Intern | Digifyde, Remote, USA | Jun 2026 - Present

- Owned the Agent Harness build-out and Orion platform's AI transformation, architecting a centralized system to manage LLM agents, prompts, tools, and workflows.
- Led data mapping for the Orion platform transformation and built PII redaction and filtering guardrails to prevent sensitive client data from reaching external LLMs, secured by role-based authentication and authorization.
- Shipped production AI features across frontend and backend by structuring data across PostgreSQL and MongoDB via a medallion pipeline, and refining prompt engineering directly with clients to improve response accuracy.

Software Engineer | Thermal Systems, Hyderabad, India | Jan 2024 - Dec 2024

- Cut SQL query latency from 8s to 350ms by redesigning PostgreSQL schemas, indexes, and execution plans over 850K+ records/day.
- Raised ML model-serving API throughput 45% by containerizing microservices on AWS with Docker, Redis caching, request batching, and horizontal auto-scaling.
- Cut Sev-1 incident MTTR from 4h to under 30min with Prometheus/Grafana alerting, ELK logging, and Kubernetes self-healing over Kafka async services.

Software Developer – AI & Data Platforms | Syra Health, Hyderabad, India | Aug 2023 - Jan 2024

- Built real-time healthcare data pipelines (Kafka, PostgreSQL, Elasticsearch, GraphQL) powering risk-assessment and fraud-detection models for 220K+ users.
- Accelerated releases 40% via GitHub Actions/Docker CI/CD with zero-downtime deploys and automated rollbacks to the last stable version on failed health checks, and lifted engagement 20% with React analytics dashboards.

PROJECTS

VibeQuorum | Founder & Sole Engineer | agentic SaaS | LangGraph | Cloud Run | vibequorum.app

- Drove 300+ organic signups pre-launch with zero ad spend across 5 pricing tiers, sizing real demand ahead of launch through direct feature feedback from Reddit and X.
- Architected and shipped a multi-agent SaaS backend solo: 68 endpoints across 9 routers, 12 specialized agents, and 14 integrated services spanning 8 LLM providers, OAuth, Stripe, Redis, and Supabase, running on FastAPI, LangGraph, and Cloud Run.
- Stress-tested the orchestration layer before committing to infrastructure scaling, running a full agent council through 400+ logged debates and 2,400+ cross-provider LLM calls (Google, AWS Bedrock, NVIDIA) with a sub-5% error rate.

Context-Aware AI Assistant | Open Source | MCP orchestration | tool routing | github.com/viseshb/context-aware-ai-assistant

- Built an AI assistant on FastAPI and Next.js that lets engineers query GitHub, Slack, and PostgreSQL in plain English, cutting cross-tool incident searches from 30–60 minutes to under 15 seconds by routing 16 MCP tools with source attribution, 8-layer security (JWT, RBAC, rate limiting, PII auto-redaction), sub-400ms dispatch, and 10 switchable LLM providers over 100+ concurrent WebSocket connections.

SKILLS

Languages: Python, JavaScript, TypeScript, SQL, Java, C++.

Frontend: React, Next.js, TypeScript, Tailwind CSS, Electron, HTML/CSS.

Backend & Systems: FastAPI, Node.js/Express.js, REST APIs, Microservices, System Design, WebSockets, WebHooks.

Databases: PostgreSQL, MongoDB, Redis, pgvector, Medallion Pipeline (Bronze/Silver/Gold).

Infra & Cloud: Docker, Kubernetes, GCP (Cloud Run), AWS (EC2, EKS, Lambda), Supabase, JWT Authentication & Authorization (RBAC), CI/CD (GitHub Actions).

AI/ML: PyTorch, LLMs, RAG Pipelines, Multi-Agent Systems/Orchestration, LangGraph, Vector Databases, MCP Server Development, Prompt Engineering, LLM APIs (OpenAI/Anthropic/OpenRouter), PII Redaction & Data Guardrails.
